

PRIVACY POLICY NOTICE

Thank you for visiting the Effective Interventions website which DLH maintains under contract with the Centers for Disease Control & Prevention (CDC), and for reviewing the Privacy Policy.

The privacy policy is clear:

- DLH does not collect any personally identifiable information (PII) when you visit our website unless you choose to provide that information to us (for example, via email, questionnaire, form or survey).
- Any PII that you choose to provide is fully protected.
- Non-PII information related to your visit to our website may be automatically collected and temporarily stored.

Here is how we handle information about your visit to our website:

During a visit to this website, if the website is simply browsed or information downloaded, certain information will be gathered and stored automatically about the visit. This information does **not** identify you personally. The CDC uses a third-party analytics provider (for current provider please see [current third-party tools/pages list](#)) to collect and summarize this information in conjunction with cookies. The third-party analytics provider does not receive personally identifiable information through these cookies and is prohibited from combining, matching or cross-referencing CDC.gov information with any other information.

Through the use of [WebLog Expert](#), DLH automatically collects and stores website trends without identifying individual users. When you browse Effective Interventions webpages, information is collected about your web surfacing device and your visit. We also collect data about your browsing, searching and downloading activity as you interact with our site. We may collect your IP address, web addresses of the sites you come from and information about your connection, including your internet browser, operating system, platform type and internet connection speed. We use this information for operational and performance measurement purposes including monitoring statistics such as how many people visit our website; which pages people visit on our site; how much time is spent on each page; or which browsers are used to visit our site.

Collection and analysis of information and web trends from our site will help us enhance site performance, improve informational materials available on our website, and improve overall customer service. Our website logs are not personally identifiable, and we make no attempt to link them with the individuals who actually browse the site. For example, when we track which pages are most popular among visitors as a whole, pages viewed are not identified with individual users.

When inquiries are sent to us via email, we store the question and the email address information so that we can respond electronically.

For site security purposes and to ensure that this service remains available to all users, DLH employs software programs to identify unauthorized attempts to upload or change information, or otherwise cause damage.

If an email message is sent or a questionnaire, form, or other online survey found on this website is completed, DLH will maintain the information in accordance with applicable federal law.

When you establish an online account with effectiveinterventions.cdc.gov to complete a training application, add your name to an email alert list, or provide similar contact information upon request to download select materials from this site, we maintain information about your user identification and password. This information is used to identify you when you sign in to your account.

DLH may provide demographic and training registration, enrollment and completion data collected during the time you spend on our site to CDC, training providers, state/local health departments and, occasionally, to academic researchers. DLH, CDC and our partners use this information to:

- select participants for trainings,
- provide notifications about scheduled trainings,
- improve the availability, quality and use of materials,
- review the demand for trainings and materials, and
- enhance the quality of HIV prevention initiatives.

DLH does not otherwise disclose, give, sell, or transfer any information about the website visitors unless required for law enforcement or otherwise required by law.

Use of Cookies

DLH uses two types of “cookies,” session-based and persistent. The majority of cookies used are session-based. These bits of information are stored temporarily in your computer’s random access memory (RAM) as a line of text. When you close your browser, the cookie is destroyed and no trace of it remains on your hard drive. These session cookies are used solely as a method to improve the user experience for those visiting the site. However, if the visitor checks the "Remember Me" option of the ASP.NET login control this generates a persistent cookie for the session. If the visitor logs in, then closes the browser without logging out, and then reopens the browser the visitor will still be logged in. If the visitor clicks on logged out, the cookie will be removed. As noted above, in no case does DLH disclose, give, sell, or transfer any personal information about website visitors unless required for law enforcement or otherwise required by law.
